

# Grace Hopper Celebration

## Leadership

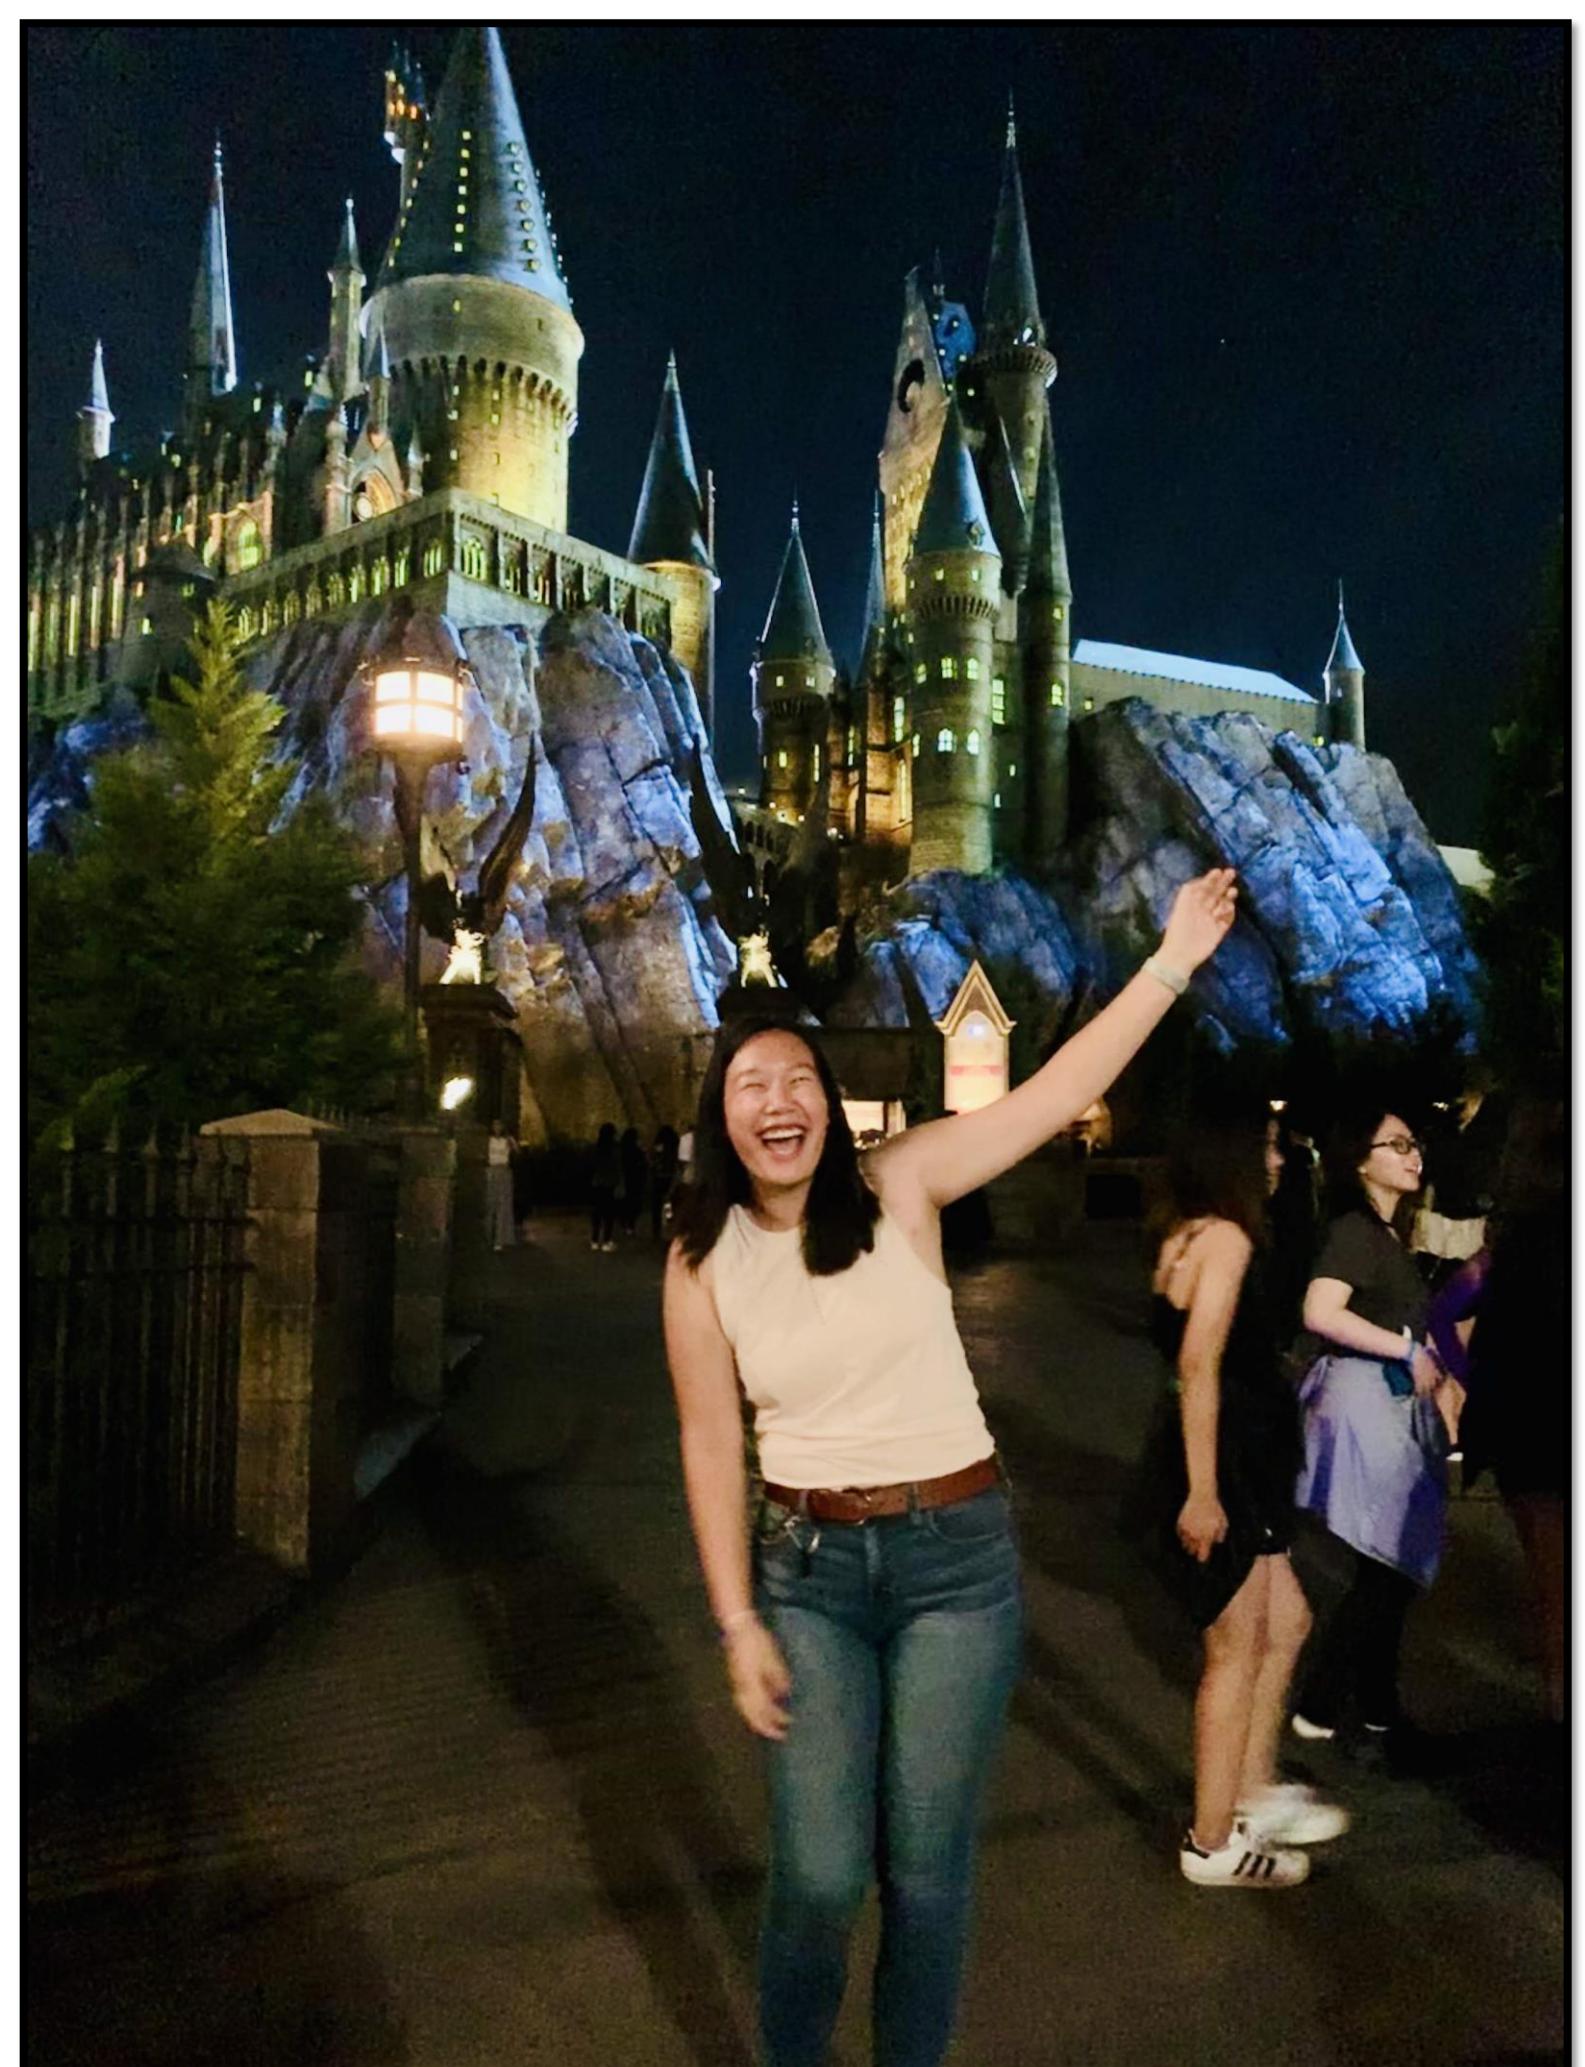

Lauren Pham, Electrical Engineering  
STEP Mentor: Dewey Mann

## What?

The Grace Hopper Celebration is an international conference focused on supporting and inspiring women in order to further their careers, break boundaries, and transform the world of technology. This 3 day conference entailed a large career fair, brilliant speakers, and demos of cutting edge tech. Over 20,000 women in tech gathered for this special event.

## Result

GHC gave me the confidence to actively chase my dreams in a full sprint forward. It's allowed me to fully develop my professional goals and personally give me the drive to achieve them.

## Why?

GHC 19 allowed me to deliberately seek out a community of women in technology. Previously, my scope of women in tech and engineering came from my Women in Engineering Learning Community and female mentors in student organizations, as faculty members, and the few I had interacted with in the workforce. When I came to GHC, I was welcomed by a sea of amazing women who were leaders in their respective fields. I was motivated to seek out intentional relationships with women in STEM and be in an environment that supported me.

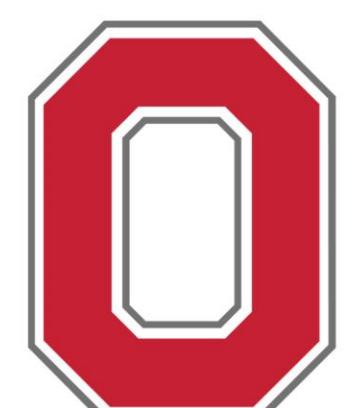

## Highlights

- Wizarding World of Harry Potter after hours
- Touching and coding a quantum computer
- Meeting a principal research scientist in neuromorphic computing
- Learning about IoT for healthcare
- Meeting plenty of women in engineering who are changing the outcome.
- Met with the Vietnamese Women in Computing Community Hall
- Spot- the Boston Dynamics robot dog
